

PORTABLE ECG

Rhythm UltraMax • RHYUM01

PORTABLE 12-LEAD ECG SYSTEM

Portable 12-lead ECG built for field deployment, emergency response, and mobile diagnostics.

IDENTITY LINE

"Portable by design. Clinical by standard."

THE PROBLEM WE SAW

Most portable ECG systems fail outside controlled hospital environments. Clinicians repeatedly face low-trust consumer-grade devices, poor waveform quality, slow ECG reporting, fragmented software, difficult doctor review workflows, and bulky systems that cannot move easily.

- Low-trust consumer-grade devices
- Poor waveform quality
- Slow ECG reporting
- Fragmented software
- Difficult doctor review workflows
- Bulky systems that cannot move easily

Existing systems were either portable but limited OR clinically strong but operationally heavy.

WHAT OTHERS ARE MISSING

Most ECG systems still separate acquisition, analysis, reporting, and doctor review into disconnected workflows. Many devices lack simultaneous 12-lead capture, provide limited arrhythmia analysis, cannot generate fast reports, and break workflow between mobile and desktop review.

Real deployment
movement

Cloud-connected review

Fast field diagnostics

WHAT WE BUILT INSTEAD

Rhythm UltraMax combines simultaneous 12-lead ECG, 24-bit precision acquisition, HRV testing, AI-assisted arrhythmia detection, cloud-connected reporting, and mobile-to-desktop workflow into one portable clinical ecosystem.

MOBILE ECOSYSTEM

Full ECG reports under 10 seconds

HRV testing

10+ arrhythmia detections

Fast waveform review

DESKTOP REVIEW SUITE

30+ arrhythmia analysis

Hyperkalemia screening

Waveform inspection tools

Magnifier and caliper analysis

Advanced clinical review workflow

Rhythm UltraMax · RHYUM01

PORTABLE 12-LEAD ECG SYSTEM

QUICK SPECS

LEAD MODE

Simultaneous 12-lead ECG

SAMPLING

1,000 samples per second per channel

ADC RESOLUTION

24-bit

CONNECTIVITY

BLE 5.0, USB, cloud sync

BATTERY

WEIGHT

4,000 mAh

298 grams

DEPLOYMENT ENVIRONMENTS

Emergency response

Rapid acquisition during urgent care.

Ambulance ECG

Pre-hospital ECG capture and quick sharing.

Rural outreach

Mobile screening where infrastructure is limited.

Clinics and OPDs

Fast diagnosis in smaller practices and clinics.

Home follow-up

Remote rhythm review after discharge.

Occupational health

On-site checks in factories and camps.

WHY RHYTHM ULTRAMAX PERFORMS BETTER

CLINICAL-GRADE PRECISION

24-bit ADC with simultaneous 12-lead ECG at 1000 SPS/channel.

FASTER WORKFLOW

Generate and share ECG reports in under 10 seconds.

BETTER DOCTOR USABILITY

Desktop waveform analysis with measurements, annotations, and detailed review.

CONNECTED ECOSYSTEM

Device → Mobile → Cloud → Cardiox Desktop → Report.

BUILT FOR MOVEMENT

Designed for ambulances, camps, clinics, bedside care, and outreach deployment.

FUTURE-READY PLATFORM

Holter monitoring and expanded AI diagnostics already in development.

CLINICAL WORKFLOW

1

RECORD

Full simultaneous 12-lead ECG at the point of care.

2

REVIEW

Fast operator checks inside Rhythm UltraMax Pro.

3

SYNC

Push the trace to cloud-connected storage.

4

REPORT

Generate a shareable clinical PDF quickly.

5

DOCTOR

Review on desktop with measurements and interpretation tools.

FUTURE EXPANSION

Holter Monitoring

Continuous ambulatory ECG monitoring for long-duration rhythm analysis and cardiac event detection.

Advanced AI Analysis

Expanded diagnostic intelligence and deeper arrhythmia interpretation workflows.
